

Overview operations

1. LISTRESERVATIONS

Operation Name	ListReservations(ListReservations)			
Class Name	ExecutorIntegrationModuleV4			
Description	This function retrieves the reserved Recip-e identifiers and their reservation dates. The request contains a start date: only reservations after the start date are returned. The SDK maintains a list of previous returned reservations (RID + reservation date). The status of the prescription is not modified by calling this operation.			
Errors	Specific exception details are returned in the encrypted part of the response. See <i>StatusType.message</i> . Technical Services Exception such as a Connection failure to the Recip-e server are caught by eHealth and translated into a SOA-fault.			
Inputs Integration Module	Request-entity	Attribute	Type	Description
	ListReservationsParam	symmKey	Byte []	The symmetric key to be used by Recip-e to encrypt the response
		startDate	String	The start date indicating the beginning of the period of the requested reservations.
		page(optional)	Page	The page to return (by default: the current month).
		Session(optional)	Session	The session is returned by the server and is contained in the first paging response. This object facilitates faster processing on the server of subsequent listrequests by storing operation specific state.
	Page	Month(unused)	int	The month of interest
		year(unused)	int	The year of interest
		pageNumber	int	The pagination number
	Session		byte []	The session context. This object is unreadable for the client.
	ListReservations	ListReservationsParamSealed	Byte[]	The ListReservationsParam-object sealed with the Recip-e ETK
		programIdentification	String	The identifier of the calling executor program
		mguid	String	The mguid to identify the request
Output Integration Module	Response-entity	Attribute	Type	Description
	ListReservationsResponse	ListReservationsResultSealed	Byte []	Sealed byte representation of the ListReservationsResult-object. Unseal with the symmetric key from the request-parameters.
	ListReservationsResult	status	StatusType	Contains the StatusType-object - object
		items	List	List of ListReservationsResultItem-objects

	<i>hasMoreResults</i>	Boolean	Flag indicating if there are more results
	<i>session</i>	Session	The session is returned by the server and is contained in the first paging response. This object facilitates faster processing on the server of subsequent listrequests by storing operation specific state.
<i>ListReservationsResultItem</i>	<i>rid</i>	String	The Recip-e identifier
	<i>executorId</i>	String	The executor identifier
	<i>creationDateReservation</i>	Calendar	The creationdate of the reservation
	<i>lastUpdateReservation</i>	Calendar	The lastupdate of the reservation
	<i>Prescription</i>	GetOpenPrescriptionForExecutor	The prescription without the proof
	<i>creationDate</i>	Calendar	The creationdate of the prescription
	<i>expirationDate</i>	Calendar	The expirationdate of the prescription
	<i>prescriptionStatus</i>	PrescriptionStatus	The prescription status
	<i>patientId</i>	String	The patient identifier
	<i>prescriberId</i>	String	The prescriber identifier
	<i>emailAddress</i>	String	The email address
	<i>telephoneNumber</i>	String	The telephone number
	<i>contactPreference</i>	contactPreference	The preferred contact. (possible values are defined in the recipe-core.xsd file under the simpleType: contactPreference)
	<i>GetOpenPrescriptionForExecutor rid</i>	String	The Recip-e identifier
	<i>prescriptionStatus</i>	PrescriptionStatus	The prescription status of the Recip-e identifier
	<i>creationdate</i>	Date	The creation date of the prescription
	<i>patientId</i>	String	The patientId
	<i>prescription</i>	Byte []	The prescription bytes
	<i>feedbackAllowed</i>	Boolean	Flag indicating feedback is allowed or not
	<i>expirationDate</i>	Calendar	The expiration date of the prescription
	<i>prescriptionType</i>	String	The prescription type
	<i>encryptionKeyId</i>	String	The encryption key id
	<i>prescriberId</i>	String	The prescriber id
<i>StatusType</i>	<i>statusCode</i>	String	100: ok 300: error occurred

	<i>code</i>	<i>String</i>	<i>The technical code of the error message e.g. error.validation.x.y.z</i>
	<i>message</i>	<i>String</i>	<i>The error message</i>
	<i>statusUpdater</i>	<i>String</i>	<i>The last statusUpdater in case an operation is not permitted</i>

2. PUTRIDSinPROCESS

Operation Name	<i>PutRidsInProcess(PutRidsInProcess)</i>			
Class Name	<i>ExecutorIntegrationModuleV4</i>			
Description	<p><i>This function sets a list of prescriptions in status InProcess. The request is limited to process 10 RIDs in one request. The response returns the set of RIDs and their actual status. If the status in the response is not the expected InProcess-status, this means that a problem occurred to update the RID to this status.</i></p> <p><i>An example response could be:</i></p> <pre>{ (RID1, InProcess, statusUpdater1), (RID2, Archived, statusUpdater2) }</pre> <ul style="list-style-type: none"> <i>As RID1 has the status InProcess, this update took place correctly. The statusUpdater is the person who called the PutRidsInProcess-operation.</i> <i>As RID2 has the status Archived, the update to status InProcess could not take place and the operation will return the actual status from the prescription. The statusUpdater is the person who archived the prescription.</i> 			
Errors	<p><i>Specific exception details are returned in the encrypted part of the response. See StatusType.message. Technical Services Exception such as a Connection failure to the Recip-e server are caught by eHealth and translated into a SOA-fault.</i></p>			
Inputs Integration Module	Request-entity	Attribute	Type	Description
	<i>PutRidsInProcessParam</i>	<i>symmKey</i>	<i>Byte []</i>	<i>The symmetric key to be used by Recip-e to encrypt the response</i>
		<i>rids</i>	<i>List<String></i>	<i>The Recip-e identifiers to put in process</i>
	<i>PutRidsInProcess</i>	<i>PutRidsInProcessParamSealed</i>	<i>Byte[]</i>	<i>The PutRidsInProcessParam-object sealed with the Recip-e ETK</i>
		<i>programIdentification</i>	<i>String</i>	<i>The identifier of the calling executor program</i>

	<i>mguid</i>	<i>String</i>	<i>The mguid to identify the request</i>
Output Integration Module	Response-entity	Attribute	Type
	<i>PutRidsInProcessResponse</i>	<i>putRidsInProcessResultSealed</i>	<i>Byte []</i>
			<i>Sealed byte representation of PutRidsInProcessResult. Unseal with the symmetric key from the PutRidsInProcessParam-</i>
	<i>PutRidsInProcessResult</i>	<i>Status</i>	<i>StatusType</i>
			<i>Contains the StatusType-object - object</i>
		<i>items</i>	<i>List</i>
			<i>List containing items of type the PutRidsInProcessResultItem-object</i>
	<i>PutRidsInProcessResultItem</i>	<i>rid</i>	<i>String</i>
			<i>The Recip-e identifier</i>
		<i>prescriptionStatus</i>	<i>PrescriptionStatus</i>
			<i>The prescription status</i>
		<i>statusUpdater</i>	<i>String</i>
			<i>The statusUpdater</i>
	<i>StatusType</i>	<i>statusCode</i>	<i>String</i>
			<i>100: ok 300: error occurred</i>
		<i>code</i>	<i>String</i>
			<i>The technical code of the error message e.g. error.validation.x.y.z</i>
		<i>message</i>	<i>String</i>
			<i>The error message</i>
		<i>statusUpdater</i>	<i>String</i>
			<i>The last statusupdater in case an operation is not permitted</i>

3. LISTRIDSINPROCESS

Operation Name	ListRidsInProcess(ListRidsInProcess)			
Class Name	ExecutorIntegrationModuleV4			
Description	This function retrieves a list of RIDs which have the status InProcess. The status of the prescription is not modified by executing this function.			
Errors	Specific exception details are returned in the encrypted part of the response. See StatusType.message. Technical Services Exception such as a Connection failure to the Recip-e server are caught by eHealth and translated into a SOA-fault.			
Inputs Integration Module	Request-entity	Attribute	Type	Description
	ListRidsInProcessParam	symmKey	Byte []	The symmetric key to be used by Recip-e to encrypt the response
		page(optional)	Page	The page to return. (by default: the last previous 12 months).
		page(optional)	Page	The page to return. (by default: the last previous 12 months).
		Session(optional)	Session	The session is returned by the server and is contained in the first paging response. This object facilitates faster processing on the server of subsequent listrequests by storing operation specific state.
	Page	Month(unused)	int	The month of interest
		year(unused)	int	The year of interest
		pageNumber	int	The pagination number
	Session		byte []	The session context. This object is unreadable for the client.
	ListRidsInProcess	ListRidsInProcessParamSealed	Byte[]	The ListRidsInProcessParam-object sealed with the Recip-e ETK
		programIdentification	String	The identifier of the calling executor program
		mguid	String	The mguid to identify the request

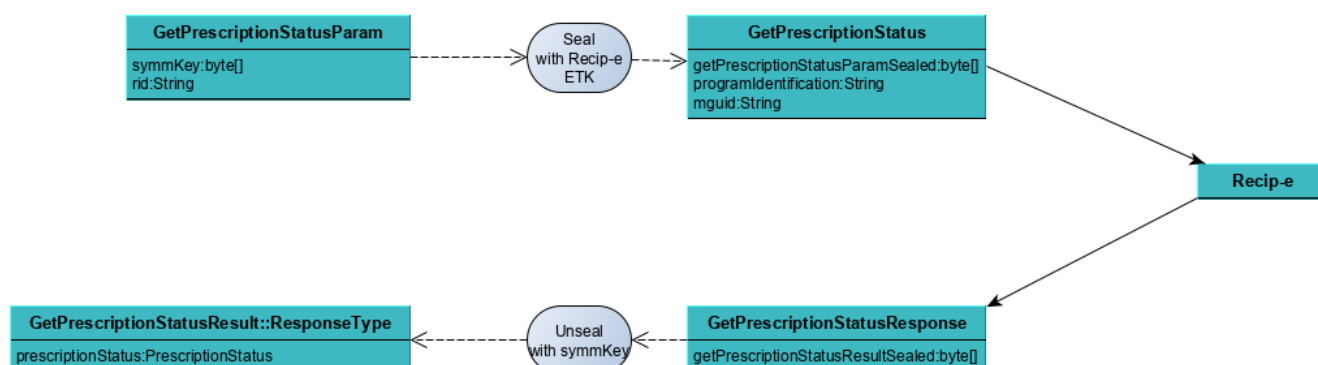

Output Integration Module	Response-entity	Attribute	Type	Description
	ListRidsInProcessResponse	ListRidsInProcessResult Sealed	Byte []	Sealed byte representation of the ListRidsInProcessResult-object. Unseal with the symmetric key from the GetAllRidInProcessParam-object.
	ListRidsInProcessResult	status	StatusType	Contains the StatusType-object
		rids	List	List of Recip-e identifiers which have status <InProcess>
		hasMoreResults	Boolean	Flag indicating if there are more results
		session	Session	The session is returned by the server and is contained in the first paging response. This object facilitates faster processing on the server of subsequent listrequests by storing operation specific state
	StatusType	statusCode	String	100: ok 300: error occurred
		code	String	The technical code of the error message
		message	String	The error message
		statusUpdater	String	The last statusupdater in case an operation is not permitted

4. GETPRESCRIPTIONSTATUS

Operation Name	GetPrescriptionStatus(GetPrescriptionStatus)
Class Name	ExecutorIntegrationModuleV4

Description	This function retrieves the status of <u>one</u> prescription.This operation does not modify the status of the prescription.			
Errors	Specific exception details are returned in the encrypted part of the response. See <i>StatusType.message</i> . Technical Services Exception such as a Connection failure to the Recip-e server are caught by eHealth and translated into a SOA-fault.			
Inputs Integration Module	Request-entity	Attribute	Type	Description
	<i>GetPrescriptionStatusParam</i>	<i>symmKey</i>	<i>Byte []</i>	The symmetric key to be used by Recip-e to encrypt the response
		<i>rid</i>	<i>String</i>	The rid or ridEx
	<i>GetPrescriptionStatus</i>	<i>getPrescriptionStatusParamSealed</i>	<i>Byte[]</i>	<i>GetPrescriptionStatusParam</i> sealed with the Recip-e ETK
		<i>programIdentification</i>	<i>String</i>	The identifier of the calling executor program
		<i>mguid</i>	<i>String</i>	The mguid to identify the request
Output Integration Module	Response-entity	Attribute	Type	Description
	<i>GetPrescriptionStatusResponse</i>	<i>getPrescriptionStatusResultSealed</i>	<i>Byte []</i>	Sealed byte representation of <i>GetPrescriptionStatusResult</i> .
		<i>status</i>	<i>StatusType</i>	Contains the <i>StatusType</i> -object
	<i>GetPrescriptionStatusResult</i>	<i>prescriptionStatus</i>	<i>PrescriptionStatus</i>	The prescription status
		<i>statusCode</i>	<i>String</i>	100: ok 300: error occurred
	<i>StatusType</i>	<i>code</i>	<i>String</i>	The technical code of the error message e.g. error.validation.x.y.z
		<i>message</i>	<i>String</i>	The error message
		<i>statusUpdater</i>	<i>String</i>	The last status updater in case an operation is not permitted

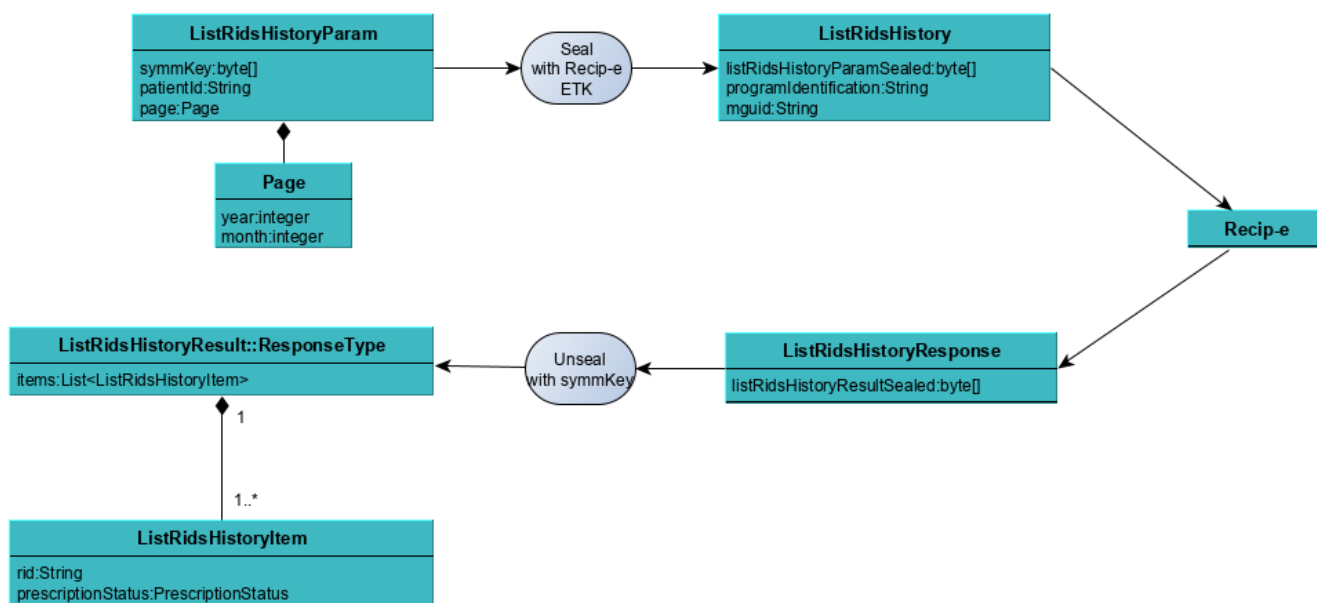

5. LISTRIDSHISTORY

Operation Name	<i>ListRidsHistory(ListRidsHistory)</i>
Class Name	<i>ExecutorIntegrationModuleV4</i>

Description	This function returns a list of RIDs and their actual status for a given patientId. The statuses of the prescriptions are not modified by calling this operation.			
Errors	Specific exception details are returned in the encrypted part of the response. See <i>StatusType.message</i> . Technical Services Exception such as a Connection failure to the Recip-e server are caught by eHealth and translated into a SOA-fault.			
Inputs Integration Module	Request-entity	Attribute	Type	Description
	ListRidsHistoryParam	symmKey	Byte []	The symmetric key to be used by Recip-e to encrypt the response
		patientId	String	The patient identifier
		activeResults	Boolean	Flag indicating to return active or historical prescriptions
		breakTheGlass	breakTheGlass type is defined in UnsealedExecutorServicesV4_schema1	
		page(optional)	Page	The page to return. (by default: the last previous 12 months).
		Session(optional)	Session	The session is returned by the server and is contained in the first paging response. This object facilitates faster processing on the server of subsequent listrequests by storing operation specific state.
	Page	Month(unused)	int	The month of interest
		year(unused)	int	The year of interest
		pageNumber	int	The pagination number
	Session		byte []	The session context. This object is unreadable for the client.
	ListRidsHistory	ListRidsHistoryParamSealed		The ListRidsHistoryParam-object sealed with the Recip-e ETK
		programIdentification	String	The identifier of the calling executor program
		mguid	String	The mguid to identify the request
Output Integration Module	Response-entity	Attribute	Type	Description
	ListRidsHistoryResponse	ListRidsHistoryResultSealed	Byte []	Sealed byte representation of the ListRidsHistoryResult-object. Unseal with the symmetric key from the request.
	ListRidsHistoryResult	status	StatusType	Contains the StatusType-object
		items	List	The list of the ListRidsHistoryItem-object

	<i>hasMoreResults</i>	Boolean	Flag indicating if there are more results
	<i>session</i>	Session	The session is returned by the server and is contained in the first paging response. This object facilitates faster processing as the server of subsequent list requests by storing session
<i>ListRidsHistoryItem</i>	<i>rid</i>	String	The Recip-e identifier
	<i>prescriptionStatus</i>	PrescriptionStatus	The prescription status
<i>StatusType</i>	<i>statusCode</i>	String	100: ok 300: error occurred
	<i>code</i>	String	The technical code of the error message e.g. error.validation.x.y.z
	<i>message</i>	String	The error message
	<i>statusUpdater</i>	String	The last statusUpdater in case an operation is not permitted

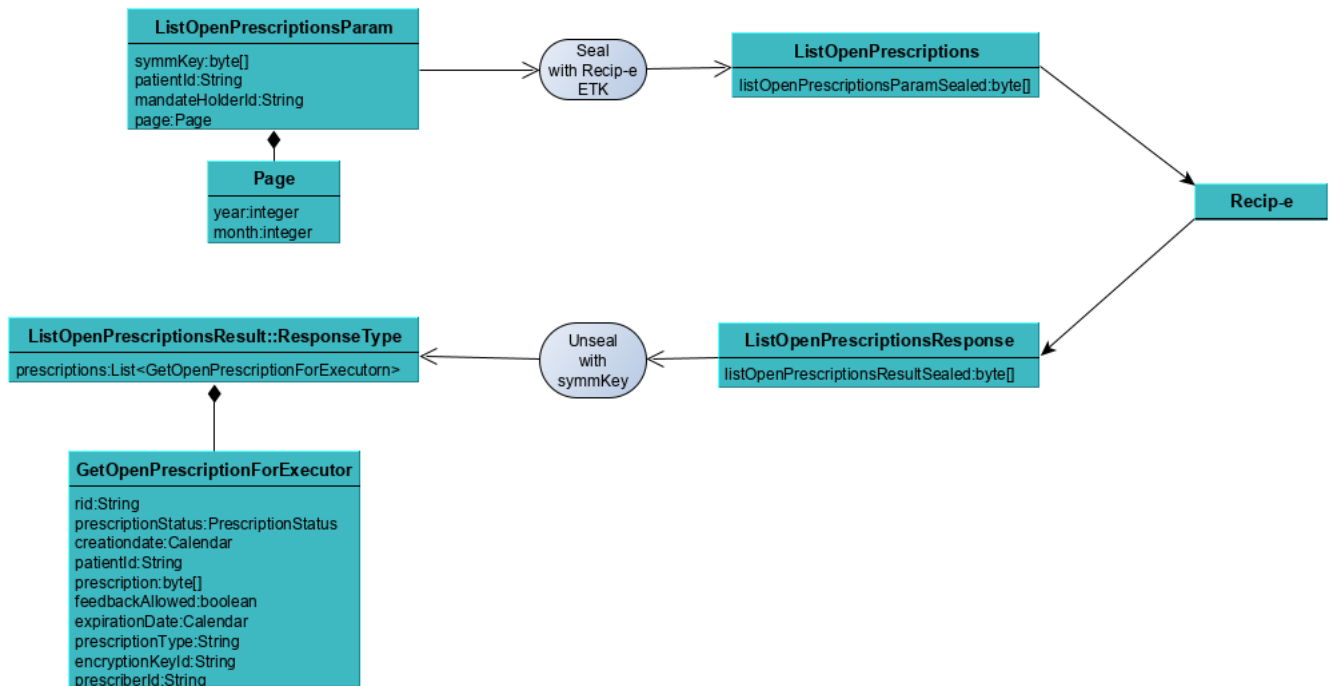

6. LISTOPENPRESCRIPTIONS

Operation Name	ListOpenPrescriptions(ListOpenPrescriptions)
Class Name	ExecutorIntegrationModuleV4
Description	This function retrieves a list of prescriptions including the encryption key without the proof. The statuses of the prescriptions are not modified by calling this operation.
Errors	Specific exception details are returned in the encrypted part of the response. See <i>StatusType.message</i> . Technical Services Exception such as a Connection failure to the Recip-e server are caught by eHealth and translated into a SOA-fault.

Inputs Integration Module	Request-entity	Attribute	Type	Description
	<i>ListOpenPrescriptionsParam</i>	<i>symmKey</i>	<i>Byte []</i>	<i>The symmetric key to be used by Recip-e to encrypt the response</i>
		<i>mandateHolderId</i>	<i>String</i>	<i>The mandateholder identifier</i>
		<i>patientId</i>	<i>String</i>	<i>The patient identifier</i>
		<i>breakTheGlass</i>	<i>breakTheGlass</i>	<i>breakTheGlass type is defined in UnsealedExecutorServicesV4_schema1</i>
		<i>page(optional)</i>	<i>Page</i>	<i>The page to return. (by default: the last previous 12 months).</i>
		<i>session(optional)</i>	<i>Session</i>	<i>The session is returned by the server and is contained in the first paging response. This object</i>
	<i>Page</i>	<i>Month(unused)</i>	<i>int</i>	<i>The month of interest</i>
		<i>year(unused)</i>	<i>int</i>	<i>The year of interest</i>
		<i>pageNumber</i>	<i>int</i>	<i>The pagination number</i>
	<i>Session</i>		<i>byte []</i>	<i>The session context. This object is unreadable for the client.</i>
	<i>ListOpenPrescriptions</i>	<i>ListOpenPrescriptionsParamSealed</i>	<i>Byte[]</i>	<i>The ListOpenPrescriptionsParam-object sealed with the Recip-e ETK</i>
		<i>programIdentification</i>	<i>String</i>	<i>The identifier of the calling executor program</i>
		<i>mguid</i>	<i>String</i>	<i>The mguid to identify the request</i>
Output Integration Module	Response-entity	Attribute	Type	Description
	<i>ListOpenPrescriptionsResponse</i>	<i>ListOpenPrescriptionsResultSealed</i>	<i>Byte []</i>	<i>Sealed byte representation of the ListOpenPrescriptionsResult-object. Unseal with the symmetric key from the request-parameters.</i>
	<i>ListOpenPrescriptionsResult</i>	<i>status</i>	<i>StatusType</i>	<i>Contains the StatusType-object</i>
		<i>prescriptions</i>	<i>List</i>	<i>The list of <u>GetOpenPrescriptionForExecutor-objects</u></i>
		<i>hasMoreResults</i>	<i>Boolean</i>	<i>Flag indicating if there are more results</i>
		<i>session</i>	<i>Session</i>	<i>The session is returned by the server and is contained in the first paging response. This object facilitates faster processing on</i>

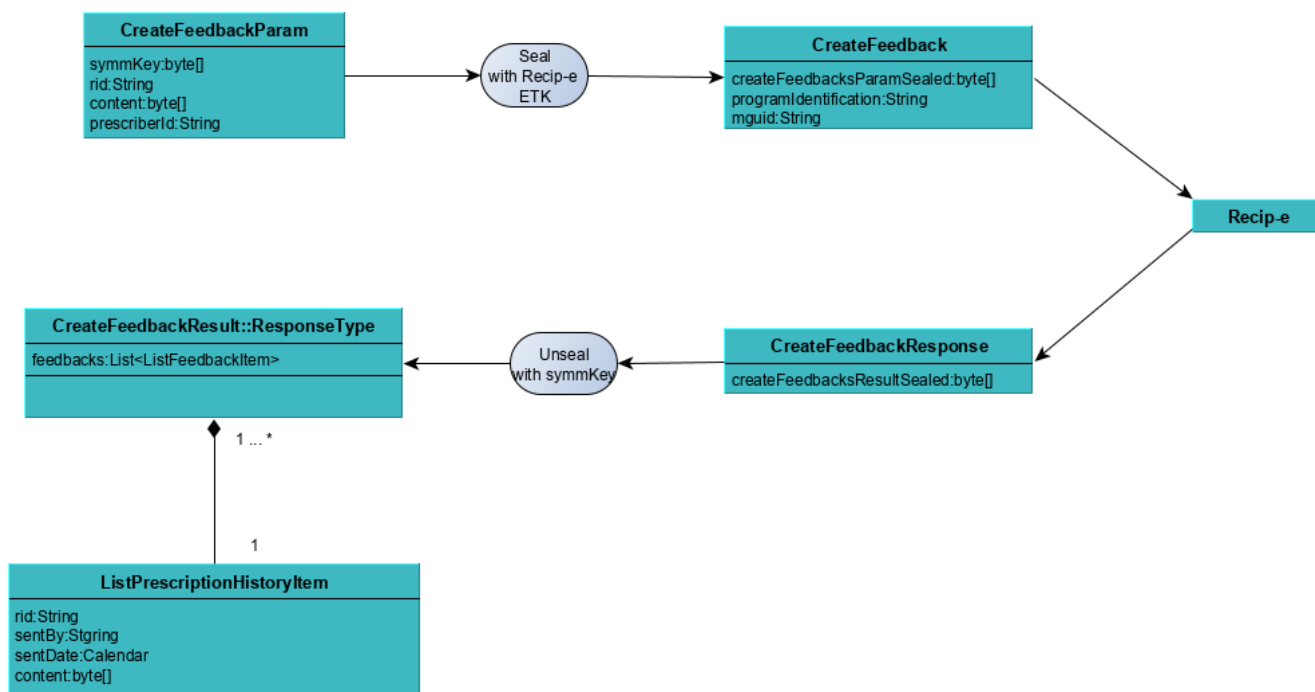

<u>GetOpenPrescriptionForExecutor</u>	<i>rid</i>	<i>String</i>	<i>The Recip-e identifier</i>
	<i>prescriptionStatus</i>	<i>PrescriptionStatus</i>	<i>The prescription status of the Recip-e identifier</i>
	<i>creationdate</i>	<i>Date</i>	<i>The creation date of the prescription</i>
	<i>patientId</i>	<i>String</i>	<i>The patientId</i>
	<i>prescription</i>	<i>Byte []</i>	<i>The prescription bytes</i>
	<i>feedbackAllowed</i>	<i>Boolean</i>	<i>Flag indicating feedback is allowed or not</i>
	<i>expirationDate</i>	<i>Calendar</i>	<i>The expiration date of the prescription</i>
	<i>prescriptionType</i>	<i>String</i>	<i>The prescription type</i>
	<i>encryptionKeyId</i>	<i>String</i>	<i>The encryption key id</i>
	<i>prescriberId</i>	<i>String</i>	<i>The prescriber id</i>
	<i>statusCode</i>	<i>String</i>	<i>100: ok 300: error occurred</i>
<i>StatusType</i>	<i>code</i>	<i>String</i>	<i>The technical code of the error message e.g. error.validation.x.y.z</i>
	<i>message</i>	<i>String</i>	<i>The error message</i>
	<i>statusUpdater</i>	<i>String</i>	<i>The last statusupdater in case an operation is not permitted</i>

7. CREATEFEEDBACK

Operation Name	CreateFeedback(CreateFeedback)			
Class Name	ExecutorIntegrationModuleV4			
Description	This operation sends a feedback from an executor to a prescriber.			
Errors	Specific exception details are returned in the encrypted part of the response. See <i>StatusType.message</i> . Technical Services Exception such as a Connection failure to the Recip-e server are caught by eHealth and translated into a SOA-fault.			
Inputs Integration Module	Request-entity	Attribute	Type	Description
	CreateFeedbackParam	symmKey	Byte []	The symmetric key to be used by Recip-e to encrypt the
		rid	String	The Recip-e identifier
		content	Byte []	The content of the feedback
		prescriberId	String	The prescriber identification
	CreateFeedback	createFeedbackParamSealed	Byte[]	The CreateFeedbackParam-object sealed with the Recip-e FTK
		programIdentification	String	The identifier of the calling executor program
		mguid	String	The mguid to identify the request
Output Integration Module	Response-entity	Attribute	Type	Description
	CreateFeedbackResponse	createFeedbackResultSealed	Byte []	Sealed byte representation of the CreateFeedbackResult-object. Unseal with the symmetric key

<i>CreateFeedbackResult</i>	<i>status</i>	<i>StatusType</i>	Contains the <i>StatusType</i> -object
<i>StatusType</i>	<i>statusCode</i>	<i>String</i>	100: ok 300: error occurred
	<i>code</i>	<i>String</i>	The technical code of the error message e.g. <i>error.validation.failed</i>
	<i>message</i>	<i>String</i>	The error message
	<i>statusUpdater</i>	<i>String</i>	The last statusupdater in case an operation is not permitted

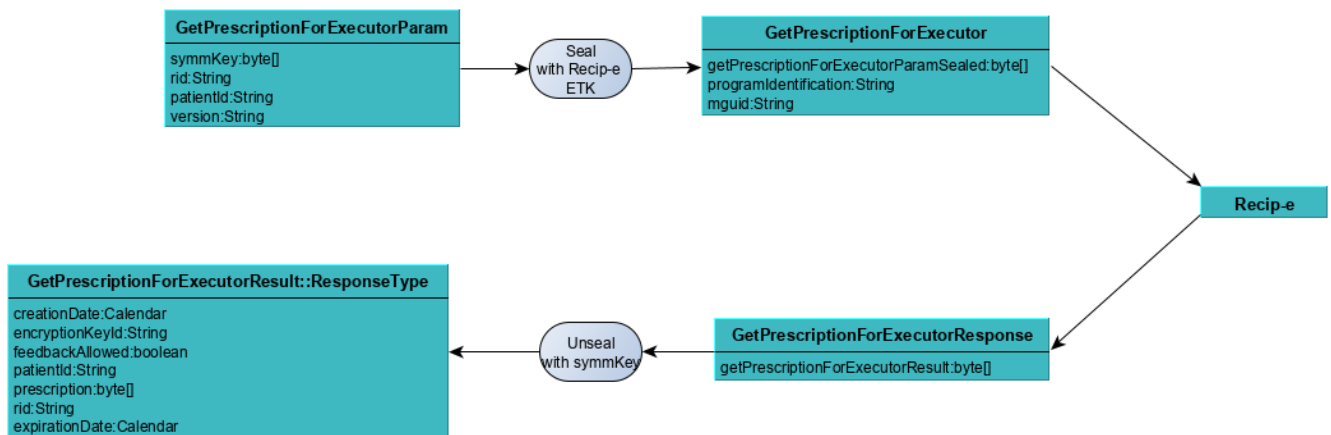

8. GETPRESCRIPTIONFOREXECUTOR

Operation Name	<i>GetPrescriptionForExecutor(GetPrescriptionForExecutor)</i>			
Class Name	<i>ExecutorIntegrationModuleV4</i>			
Description	This operation returns the prescription (with encrypted prescription bytes) for a given Recip-e identifier. This operation does modify the status of the prescription to InProcess.			
Errors	Specific exception details are returned in the encrypted part of the response. See <i>StatusType.message</i> . Technical Services Exception such as a Connection failure to the Recip-e server are caught by eHealth and translated into a SOA-fault.			
Inputs Integration Module	Request-entity	Attribute	Type	Description
	<i>GetPrescriptionForExecutorParam</i>	<i>symmKey</i>	<i>Byte []</i>	The symmetric key to be used by Recip-e to encrypt the response

		<i>rid</i>	<i>String</i>	The Recip-e identifier
		<i>patientId</i>	<i>String</i>	The patient identifier
		<i>version</i>	<i>String</i>	The prescription version
	<i>GetPrescriptionForExecutor</i>	<i>getPrescriptionForExecutorParamSealed</i>	<i>Byte[]</i>	The <i>GetPrescriptionForExecutorParam</i> -object sealed with the Recip-e ETK
		<i>programIdentification</i>	<i>String</i>	The identifier of the calling executor program
		<i>mguid</i>	<i>String</i>	The mguid to identify the request
Output Integration Module	Response-entity	Attribute	Type	Description
	<i>GetPrescriptionForExecutorResponse</i>	<i>getPrescriptionForExecutorResult</i>	<i>GetPrescriptionForExecutorResultWrapper</i>	The <i>GetPrescriptionForExecutorResponse</i> -object
	<i>GetPrescriptionForExecutorResultWrapper</i>	<i>getPrescriptionForExecutorUnsealedResultPart</i>	<i>GetPrescriptionForExecutorUnsealedResultPart</i>	The <i>GetPrescriptionForExecutorUnsealedResultPart</i> -object
		<i>getPrescriptionForExecutorResultSealed</i>	<i>Byte []</i>	Sealed representation of the <u><i>GetPrescriptionForExecutorResultSealed</i></u> -object
	<i>GetPrescriptionForExecutorUnsealedResultPart</i>	<i>patientId</i>	<i>String</i>	The patient identifier
		<i>prescriptionType</i>	<i>String</i>	The prescription type
	<i>GetPrescriptionForExecutorResultSealed</i>	<i>rid</i>	<i>String</i>	The Recip-e identifier
		<i>creationDate</i>	<i>Calendar</i>	The creation date
		<i>patientId</i>	<i>String</i>	The patient identifier
		<i>feedbackAllowed</i>	<i>boolean</i>	Flag indicating if feedback is allowed
		<i>prescription</i>	<i>Byte []</i>	The encrypted prescription. Use the <i>encryptionKeyld</i> to decrypt the <i>prescription</i>
		<i>prescriptionType</i>	<i>String</i>	The prescription type (P0/P1)
		<i>encryptionKeyld</i>	<i>String</i>	The encryption key identifier in the KGSS register
		<i>timestampingld</i>	<i>String</i>	The timestamping identifier
		<i>prescriberId</i>	<i>String</i>	The prescriber identifier
		<i>expirationDate</i>	<i>Calendar</i>	The expiration date of the <u>prescription</u>
	<i>StatusType</i>	<i>statusCode</i>	<i>String</i>	100: ok 300: error occurred
		<i>code</i>	<i>String</i>	The technical code of the error message e.g. <i>error.validation.x.y.z</i>

	<i>message</i>	<i>String</i>	<i>The error message</i>
	<i>statusUpdater</i>	<i>String</i>	<i>The last statusupdater in case an operation is not permitted</i>

9. MARKASARCHIVED

Operation Name	MarkAsArchived(MarkAsArchived)			
Class Name	ExecutorIntegrationModuleV4			
Description	This operation marks the status of a prescription as Archived. The prescription bytes are removed.			
Errors	Specific exception details are returned in the encrypted part of the response. See <i>StatusType.message</i> . Technical Services Exception such as a Connection failure to the Recip-e server are caught by eHealth and translated into a SOA-fault.			
Inputs Integration Module	Request-entity	Attribute	Type	Description
	MarkAsArchivedParam	symmKey	Byte []	The symmetric key to be used by Recip-e to encrypt the response
		rid	String	The Recip-e identifier
	MarkAsArchived	markAsArchivedParamSealed	Byte[]	The MarkAsArchivedParam-object sealed with the Recip-e ETK
		programIdentification	String	The identifier of the calling executor program

		<i>mguid</i>	<i>String</i>	<i>The mguid to identify the request</i>
Output Integration Module	Response-entity	Attribute	Type	Description
	<i>MarkAsArchivedResponse</i>	<i>markAsArchivedResultSealed</i>	<i>Byte []</i>	<i>Sealed byte representation of the MarkAsArchivedResult-object.</i>
	<i>MarkAsArchivedResult</i>	<i>status</i>	<i>StatusType</i>	<i>Contains the StatusType-object</i>
	<i>StatusType</i>	<i>statusCode</i>	<i>String</i>	<i>100: ok 300: error occurred</i>
		<i>code</i>	<i>String</i>	<i>The technical code of the error message e.g. error.validation.x.y.z</i>
		<i>message</i>	<i>String</i>	<i>The error message</i>
		<i>statusUpdater</i>	<i>String</i>	<i>The last statusupdater in case an operation is not permitted</i>

10. MARKASDELIVERED

Operation Name	<i>MarkAsDelivered(MarkAsDelivered)</i>
Class Name	<i>ExecutorIntegrationModuleV4</i>
Description	<i>This operation marks status of a prescription as Delivered.</i>

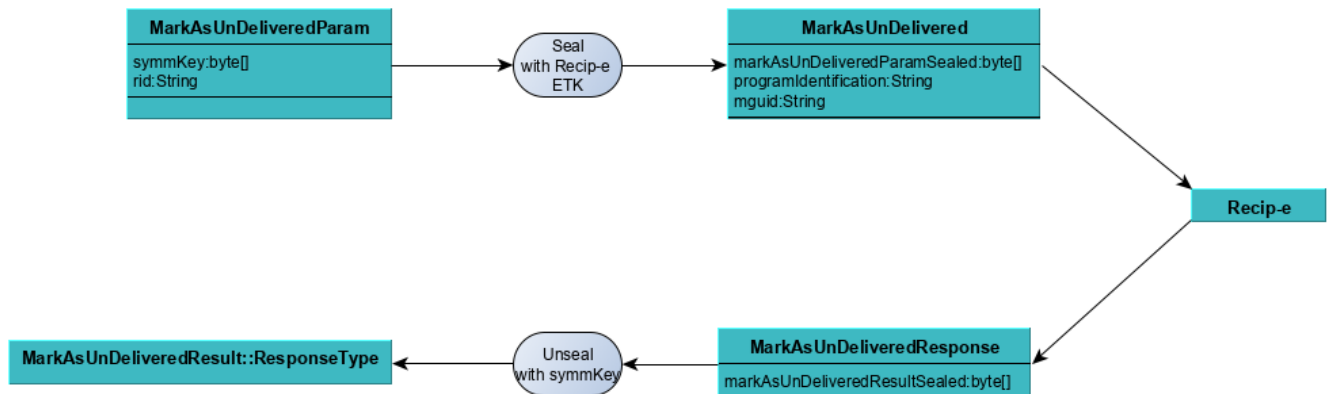

Errors	Specific exception details are returned in the encrypted part of the response. See <i>StatusType.message</i> . <i>Technical Services Exception</i> such as a <i>Connection failure</i> to the Recip-e server are caught by eHealth and translated into a <i>SOA-fault</i> .			
Inputs Integration Module	Request-entity	Attribute	Type	Description
	<i>MarkAsDeliveredParam</i>	<i>symmKey</i>	<i>Byte []</i>	<i>The symmetric key to be used by Recip-e to encrypt the response</i>
		<i>rid</i>	<i>String</i>	The Recip-e identifier
	<i>MarkAsDelivered</i>	<i>markAsDeliveredParamSealed</i>	<i>Byte[]</i>	<i>The MarkAsDeliveredParam-object sealed with the Recip-e ETK</i>
		<i>programIdentification</i>	<i>String</i>	<i>The identifier of the calling executor program</i>
		<i>mguid</i>	<i>String</i>	<i>The mguid to identify the request</i>
Output Integration Module	Response-entity	Attribute	Type	Description
	<i>MarkAsDeliveredResponse</i>	<i>markAsDeliveredResultSealed</i>	<i>Byte []</i>	<i>Sealed byte representation of the MarkAsDeliveredResult-object. Unseal with the</i>
		<i>status</i>	<i>StatusType</i>	<i>Contains the StatusType-object</i>
	<i>StatusType</i>	<i>statusCode</i>	<i>String</i>	<i>100: ok 300: error occurred</i>
		<i>code</i>	<i>String</i>	<i>The technical code of the error message e.g. error.validation.x.y.z</i>
		<i>message</i>	<i>String</i>	<i>The error message</i>
		<i>statusUpdater</i>	<i>String</i>	<i>The last statusUpdater in case an operation is not permitted</i>

11. MARKASUNDELIVERED

Operation Name	MarkAsUnDelivered(MarkAsUndelivered)			
Class Name	ExecutorIntegrationModuleV4			
Description	This operation marks status of a prescription as NotDelivered.			
Errors	Specific exception details are returned in the encrypted part of the response. See <i>StatusType.message</i> . Technical Services Exception such as a Connection failure to the Recip-e server are caught by eHealth and translated into a SOA-fault.			
Inputs Integration Module	Request-entity	Attribute	Type	Description
	MarkAsUndeliveredParam	symmKey	Byte []	The symmetric key to be used by Recip-e to encrypt the response
		Rid	String	The Recip-e identifier
	MarkAsUndelivered	markAsUndeliveredParamSealed	Byte[]	The MarkAsUndeliveredParam-object sealed with the Recip-e ETK
		programIdentification	String	The identifier of the calling executor program
		mguid	String	The mguid to identify the request
Output Integration Module	Response-entity	Attribute	Type	Description
	MarkAsUnDeliveredResponse	markAsUnDeliveredResultSealed	Byte []	Sealed byte representation of The MarkAsUnDeliveredResult-object. Unseal with the symmetric key from the
	MarkAsUnDeliveredResult	status	StatusType	Contains the StatusType-object
	StatusType	statusCode	String	100: ok 300: error occurred

	<i>code</i>	<i>String</i>	<i>The technical code of the error message e.g. error.validation.x.y.z</i>
	<i>message</i>	<i>String</i>	<i>The error message</i>
	<i>statusUpdater</i>	<i>String</i>	<i>The last statusUpdater in case an operation is not permitted</i>

12. LISTNOTIFICATIONS

Operation Name	ListNotifications(ListNotifications)			
Class Name	ExecutorIntegrationModuleV4			
Description	This operation returns the list of notifications sent by a prescriber to a given executor.			
Errors	Specific exception details are returned in the encrypted part of the response. See StatusType.message. Technical Services Exception such as a Connection failure to the Recip-e server are caught by eHealth and translated into a SOA-fault.			
Inputs Integration Module	Request-entity	Attribute	Type	Description
	ListNotificationsParam	symmKey	Byte []	The symmetric key to be used by Recip-e to encrypt the response
		readFlag	Boolean	Flag indicating the notification is read or not.

	<i>ListNotifications</i>	<i>listNotificationsParamSealed</i>	<i>Byte[]</i>	<i>The ListNotificationsParam-object sealed with the Recip-e ETK</i>
		<i>programIdentification</i>	<i>String</i>	<i>The identifier of the calling executor program</i>
		<i>mguid</i>	<i>String</i>	<i>The mguid to identify the request</i>
Output Integration Module	Response-entity	Attribute	Type	Description
	<i>ListNotificationsResponse</i>	<i>listNotificationsResultSealed</i>	<i>Byte []</i>	<i>Sealed byte representation of The MarkAsUnDeliveredResult-object. Unseal with the</i>
	<i>ListNotificationsResult</i>	<i>status</i>	<i>StatusType</i>	<i>Contains the StatusType-object</i>
		<i>notifications</i>	<i>List</i>	<i>List of NotificaitonItem-objects</i>
	<i>ListNotificationsItem</i>	<i>sentBy</i>	<i>String</i>	<i>The identifier of the sender</i>
		<i>sentDate</i>	<i>Calendar</i>	<i>The sent date</i>
		<i>content</i>	<i>Byte []</i>	<i>The content bytes</i>
	<i>StatusType</i>	<i>statusCode</i>	<i>String</i>	<i>100: ok 300: error occurred</i>
		<i>code</i>	<i>String</i>	<i>The technical code of the error message e.g. error.validation.x.y.z</i>
		<i>message</i>	<i>String</i>	<i>The error message</i>
		<i>statusUpdater</i>	<i>String</i>	<i>The last statusupdater in case an operation is not permitted</i>

13. REVOKEPRESCRIPTION

Operation Name	RevokePrescription(RevokePrescription)			
Class Name	ExecutorIntegrationModuleV4			
Description	This operation updates the status of a prescription to Revoked. The prescription bytes are removed.			
Errors	Specific exception details are returned in the encrypted part of the response. See <i>StatusType.message</i> . Technical Services Exception such as a Connection failure to the Recip-e server are caught by eHealth and translated into a SOA-fault.			
Inputs Integration Module	Request-entity	Attribute	Type	Description
	RevokePrescriptionParam	symmKey	Byte []	The symmetric key to be used by Recip-e to encrypt the response
		rid	String	The Recip-e identifier
		reason	String	The reason of revocation
	RevokePrescription	revokePrescriptionParamSealed	Byte[]	The RevokePrescriptionParam-object sealed with the Recip-e ETK

		<i>programIdentification</i>	<i>String</i>	<i>The identifier of the calling executor program</i>
		<i>mguid</i>	<i>String</i>	<i>The mguid to identify the request</i>
Output Integration Module	Response-entity	Attribute	Type	Description
	<i>RevokePrescriptionResponse</i>	<i>revokePrescriptionResultSealed</i>	<i>Byte []</i>	<i>Sealed byte representation of The RevokePrescriptionResult-object.</i>
	<i>RevokePrescriptionResult</i>	<i>status</i>	<i>StatusType</i>	<i>Contains the StatusType-object</i>
	<i>StatusType</i>	<i>statusCode</i>	<i>String</i>	<i>100: ok 300: error occurred</i>
		<i>code</i>	<i>String</i>	<i>The technical code of the error message e.g. error.validation.x.y.z</i>
		<i>message</i>	<i>String</i>	<i>The error message</i>
		<i>statusUpdater</i>	<i>String</i>	<i>The last statusupdater in case an operation is not permitted</i>

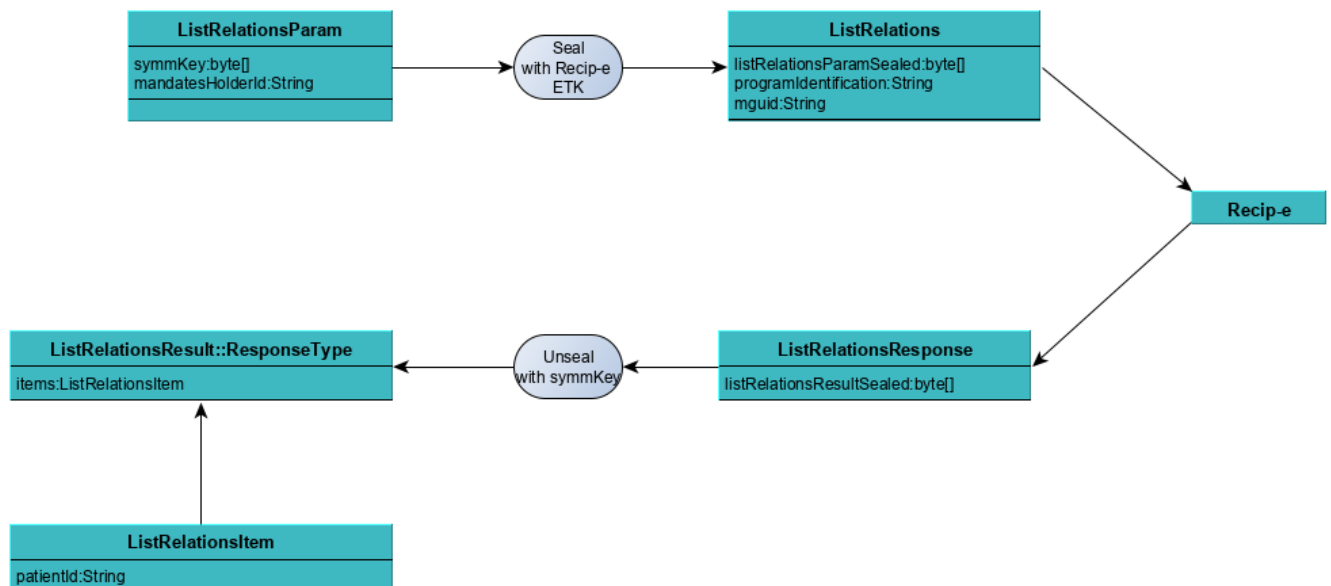

14. LISTRELATIONS

Operation Name	<i>ListRelations(ListRelations)</i>
Class Name	<i>ExecutorIntegrationModuleV4</i>
Description	<i>This operation returns the list of patients who have given a mandate to the mandateHolder which is specified in the request.</i>

Errors	Specific exception details are returned in the encrypted part of the response. See <i>StatusType.message</i> . Technical Services Exception such as a Connection failure to the Recip-e server are caught by eHealth and translated into a SOA-fault.			
Inputs Integration Module	Request-entity	Attribute	Type	Description
	<i>ListRelationsParam</i>	<i>mandateHolderId</i>	<i>String</i>	The identifier of the mandateholder
		<i>breakTheGlass</i>	<i>breakTheGlass</i>	<i>breakTheGlass</i> type is defined in <i>UnsealedExecutorServicesV4_schema1</i>
		<i>symmKey</i>	<i>Byte []</i>	The symmetric key to be used by Recip-e to encrypt the response
		<i>page(optional)</i>	<i>Page</i>	The page to return. (by default: the last previous 12 months).
		<i>session(optional)</i>	<i>Session</i>	The session is returned by the server and is contained in the first paging response. This object facilitates faster processing on the server of subsequent listrequests by storing operation specific state.
	<i>Page</i>	<i>Month(unused)</i>	<i>int</i>	The month of interest
		<i>year(unused)</i>	<i>int</i>	The year of interest
		<i>pageNumber</i>	<i>int</i>	The pagination number
	<i>Session</i>		<i>byte []</i>	The session context. This object is unreadable for the client.
	<i>ListRelations</i>	<i>ListRelationsParamSealed</i>	<i>Byte[]</i>	The <i>ListRelationsParam</i> -object sealed with the Recip-e ETK
		<i>programIdentification</i>	<i>String</i>	The identifier of the calling executor program
		<i>mguid</i>	<i>String</i>	The mguid to identify the request
Output Integration Module	Response-entity	Attribute	Type	Description
	<i>ListRelationsResponse</i>	<i>ListRelationsResultSealed</i>	<i>Byte []</i>	Sealed byte representation of the <i>ListRelationsResult</i> -object. Unseal with the symmetric key from the request.
	<i>ListRelationsResult</i>	<i>status</i>	<i>StatusType</i>	Contains the <i>StatusType</i> -object

	<i>items</i>	List	<i>The list of ListRelationsItem-objects</i>
	<i>hasMoreResults</i>	Boolean	<i>Flag indicating if there are more results</i>
	<i>session</i>	Session	<i>The session is returned by the server and is contained in the first paging response. This object facilitates faster</i>
ListRelationsItem	<i>patientId</i>	String	<i>The patient who gave the mandateHolderId a mandate to request a (list of) prescription(s) on their behalf.</i>
	<i>Firstname</i>	String	<i>The firstname of the patient who gave the mandate</i>
	<i>Lastname</i>	String	<i>The lastname of the patient who gave the mandate</i>
StatusType	<i>statusCode</i>	String	<i>100: ok 300: error occurred</i>
	<i>code</i>	String	<i>The technical code of the error message e.g. error.validation.x.y.z</i>
	<i>message</i>	String	<i>The error message</i>
	<i>statusUpdater</i>	String	<i>The last statusupdater in case an operation is not permitted</i>

Overview of changes of this document

Version Number	Date	Author	Changes (content)	Available as of
Version 1	2019/09/30	BCA	Initial version	
Version 2	2019/11/14	BCA	<ul style="list-style-type: none"> • Add <i>activeResults</i> to <i>ListRidsHistoryParam</i> • The <i>ListReservationsResult</i> contains a list of <i>ListReservationsResultItem</i>-objects in stead of <i>Reservation</i>-objects • The <i>ListReservationsResultItem</i> contains the default information of the reservation: <ul style="list-style-type: none"> ○ <i>Rid</i> ○ <i>executorId</i> ○ <i>creationdate</i> of the reservation ○ <i>last updatedate</i> of the reservation <p><i>And is extended with the following items:</i></p> <ul style="list-style-type: none"> ○ <i>Prescription without proof</i> ○ <i>Creationdate prescription</i> ○ <i>Expirationdate prescription</i> ○ <i>Status of the prescription</i> ○ <i>patientId</i> ○ <i>prescriberId</i> 	<i>Release 2020Q1</i>
Version 3	2019/12/19	BCA	Correction to <ul style="list-style-type: none"> • <i>ListOpenPrescriptions</i> • <i>ListRelations</i> 	<i>Release 2020Q1</i>
Version 4	2020/10/21	BCA	Add <i>firstname</i> and <i>lastname</i> to <i>ListRelationItem</i>	<i>Release 2020Q3</i>
Version 5	2021/08/12	NDH	Add contact details and preference to <i>createReservation</i>	
Version 6	2021/12/09	NDH	Add <i>breakTheGlass</i> to <i>ListRelations</i> , <i>ListOpenPrescriptions</i> and <i>ListRidsHistory</i>
